

New **Pro10** for Retail

When staff use wireless headsets to communicate they become a team. They're more efficient and work smarter, improving productivity...

The team is able to seek assistance, resolve queries, support customers and assign tasks between each other more effectively. And, where there's more purpose, staff wellbeing improves too. When head office wants to send the store a voice message or speak live, they come straight through to all headset wearers.

The **Pro10** headset is comfortable, light and so easy to use, it quickly becomes indispensable to the team and to your business.
